

WIDE LUNAWOOD CLADDINGS OF NORDIC SPRUCE THERMOWOOD

Lunawood Collection offers several exterior claddings made of Nordic, slowly and sustainably grown Spruce. The most impressive of them are extremely wide and at the same time rustic with either planed or brushed surface. The knots, different widths and edge shapes give each of them its own character.

The Luna Layer panel is available in two widths: 142 mm and 188 mm. The product has a brushed, rustic surface. The straight edge of the panel is modern and creates a great shadow between the panels.

Luna Vivo and **Luna Vivo Groove** are wide planed panels with slightly slanted edges. The sophisticated shape of the edges creates a flat wall -look when installed vertically. The Luna Vivo Groove panel, on the other hand, has a fake groove. The combination of these two products creates a unique rhythm and pattern on the decorative surface.

Planed **Luna TGV 19x140** has a deeper slanted edge compared to Luna Vivo. It is an elegant and timeless choice to any surface.

All our Nordic Spruce Thermowood products have SAP-side as using side. They are suitable both outdoor and indoor use and the installation direction is either vertical or horizontal depending on the desired look.
