VERSATILE LUNAWOOD BATTENS

Lunawood Thermowood battens of various sizes bring a modern look to façades, landscaping and interiors. By combining battens of different sizes, it is possible to achieve the most creative outcomes.

Lunawood Thermowood is a modern architectural wood material with low maintenance requirements, produced using only heat and steam without any chemicals. The thermal modification process gives Lunawood excellent durability, allowing it to offer long-term CO² storage.

The dimensional stability of Lunawood guarantees a long-lasting architectural appearance on decorative surfaces. Lunawood battens have a beautiful uniform brown tone, which can be retained by protecting the wood with a pigmented and UV-protected surface treatment. Untreated Lunawood Thermowood turns a beautiful silver-grey over time when exposed to UV light.

The raw material for Lunawood Battens is sustainable Nordic pine. The battens are four-side planed. All battens are treated with LunaThermo-D and are suitable both for indoor and outdoor use.

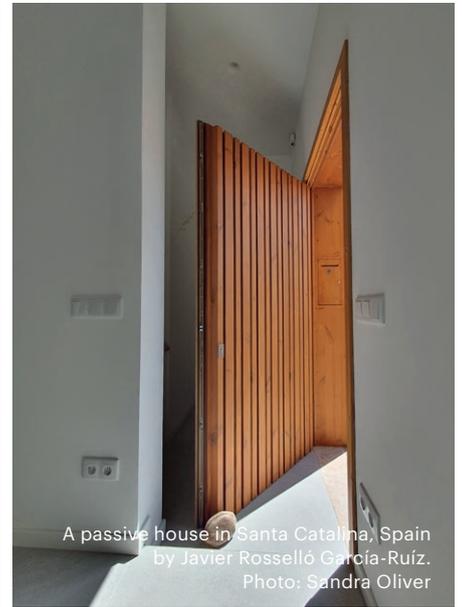

BENEFITS OF LUNAWOOD BATTENS

- Extremely dimensionally stable
- Available in several different dimensions and long lengths
- Suitable for both indoor and outdoor use
